

# Engineered Simplicity. Better Workflow.

**Flow.** Steady. Continuous. Flow continues unless something impedes or stops it.

At GSI, it's our job to make sure that never happens. We create and align solutions that remove impediments and deliver the results you demand.

GSI's software solutions help you support complex workflows, analyze comprehensive engineering data, and manage the environment to keep your lines delivering energy. It's all about giving you the energy output you need. Whether it's a new line extension, overgrown vegetation or manpower planning, our engineering and mobile solutions keep your organization completely aligned.

**ENGINEERED SIMPLICITY. BETTER WORKFLOW. GSI.**

## UTILITY DESIGN AND ENGINEERING SOFTWARE

Distribution Design Studio (DDS) is a design and engineering platform that streamlines electric and gas design workflows, reduces design cycle times, and integrates design information with GIS, work management, and other systems. The DDS solution includes structural analysis, electrical analysis, GIS rendering, CAD importing/editing, imagery services, GPS/GNSS collection, and mobile tools all in one package.

## WE PROVIDE THE WORKFORCE AND EXPERTISE TO GET YOUR DESIGN NEEDS MET

Utility Design Services (UDS) will execute the design you need while integrating the important information from your GIS and existing systems. All built to your specific utilities' standards. We have the experience in the field to survey and input the data you need and the expertise of using our own proprietary Distribution Design Studio our clients already love to bring the right solutions to life.

## TRANSMISSION AND DISTRIBUTION VEGETATION MANAGEMENT SOFTWARE

Forester is a vegetation management planning solution that can be easily configured for a variety of contract types including time & material, unit-based, and lump sum contracts. Forester's flexible software allows electric companies to coordinate contractors in the field with managers in the office, saving time and money.
