

RAMTeCH Software Solutions, Inc. (RAMTeCH), a global geospatial leader, has been delivering software development services for over 10 years and is a key capability of RAMTeCH's Professional Services business. RAMTeCH has a history of providing software development services that include:

- Creating custom, purpose-built applications with focused user interfaces
- Complex integrations between systems
- Enhancing and upgrading existing customer applications.

Building on our software development expertise, RAMTeCH is teaming up with GeoSpatial Innovations, Inc. (GSI) to deliver cohesive software development solutions that harmonize GSI's Distribution Design Studio (DDS) design and engineering software for gas and electric utilities.

RAMTeCH implements software into workflows seamlessly and provides a structured software development lifecycle that includes gathering functional requirements, creating a technical architecture and design, development through iterations, and testing, training, and go-live implementation. RAMTeCH's software applications are developed to run on desktops, web browsers, and field mobile devices to meet specific end-user requirements and workflows.
